

Introductory Medical Terminology Buzz

Very good course. The course is broken down into easily learned sections that progresses into more difficult material

Very organized, easy to follow.

Very good course I give it 10/10. Very organized. Difficult but rewarding when finished.

Very useful to help get a foundation in medical terminology. Breaking things up into simple prefixes or suffixes and base words was very helpful.

I learned the information I needed, and could do so at my own pace. I found the self pace and recommendation to keep a glossary of my own to be most helpful. Quick way to master basic medical terminology. Self-paced setup makes it convenient.

It helped me for what I need. Some sections were more difficult but it was fairly straightforward.

Very helpful. By the final, I felt very confident in my medical terminology. I liked how the class was structured in that you learned a few terms then took a quiz... good way to learn! This class was great! I could complete it at my own pace and the structure allowed me to learn quickly and effectively.

A great and comprehensive medical terminology course. Organized and cumulative which helped build medical terminology vocabulary. High quality guides and definition pages. The organized tables and bolded terms enabled easier memorization. A very enjoyable course.

I learned a lot. I took it to get a job in a hospital and I got the job. I liked the organization so I knew what to expect for the next lesson.

I thought it was helpful to group the terms by topic. Also I thought that the website was easy to navigate.

The course was very useful, made up for a lack in building words just from flashcards, a great add on.

It was challenging but not too overwhelming...it was a great mix. I would rate this high because the material went right along with everything, it was very useful.

My experience in this course was excellent. Each lesson was very organized and superbly designed.

I found it very useful, because whenever I had time to complete my assignments I could. I could work at my own pace.
